

# Lipno Lake Resort - opportunity for out-of-season valorisation

Author: SF / Juraj Pokorný | Published: 24.03.2009

No doubt that the Lipno region located in the Šumava National Park reserve - one of the largest forested territories in Europe - disposes of untouched nature and a 50km long lake in altitude of approx. 700m. High probability of plenty of snow and colder summers unanimously favours winter sports (the fully operational Lipno Ski Premises is located directly behind these premises). The hit of this winter was the longest treated skating track on the frozen lake (10,922m), which is recorded in the Guinness Book of World Records.
