Southern Company, Ltd. plans to reconstruct central heating supply (CHS) in the middle of Dunajská Streda. The company wants to spend about 12 millions Euro for this purpose. As it is apparent from the investment project, the investor wants to start with the renovation of heating system early next year, and to finish in 2011.

The Southern Company wants to increase the efficiency of heat production and reliability of supply by modernization of the central heating supply system at Dunajská Streda. „The aim is also to stabilize the price of heat for the end customers,“ said the investor in the plan. Within the modernization of the heating system at Dunajská Streda the investor wants to modernize the gas boiler-house Mlyny to heat cogeneration source combusting natural gas and wood chips, the boiler-house Západ supplemented by a boiler for combusting biomass and to build new heat distributions in the town. „Modernization will allow the use of renewable energy sources and to put gas boiler rooms, which are technically wear and tear, out of service“ says the investor in the plan.
